REVISION HISTORY

Date	Version	Revisions
2016/09/05	1.0	Initial version for affiliate api
2016/09/20	1.1.1	Update Request Sample and Response Parameter

PREFACE

The Agoda new generation Affiliate APIs are designed to provide you better, faster and more reliable Affiliate services.

This document is designed to explain each of the Availability Service APIs (Availability and Pricing) in technical details. In each section Partner will also find sample requests, responses, as well as parameters.

AVAILABILITY SERVICE

Our Affiliate API makes search functionality available to our Affiliate partners. This is using long format request, via synchronous request-response RESTful webservice.

Affiliate Availability Work Flow

Request for long result

How to Connect to Us

Request header

We recommend all requests set HTTP request header for compression:

accept-encoding: gzip, deflate

All requests **must** include an **Authorization** header with **siteid** and **apikey** (with a colon inbetween) and it must match with the **siteid** and **apikey** in the request body.

Authorization 123456:00000000-0000-0000-0000-000000000000

URLs

There are 2 environments from which the XML Availability Long Response can be accessed: sandbox and live. The sandbox environment can be used in your development to test the correctness of your XML integration while the live environment is only used when your XML integration is ready. The live URL will be provided by your account manager:

Sandbox http://sandbox-affiliateapi.agoda.com/xmlpartner/xmlservice/search_lrv3
